Profit Equation

- $\text{Revenues} = \text{Construction Costs} + \text{Overhead} + \text{Profit}$
- $\text{Profit} = \text{Revenues} - \text{Construction Costs} - \text{Overhead}$

Contribution Margin

- $\text{Contribution Margin} = \text{Revenues} - \text{Construction Costs} - \text{Variable Overhead}$
- $\text{CM Ratio} = \text{Contribution Margin} / \text{Revenues}$
- $\text{Contribution Margin} = \text{CM Ratio}(\text{Revenues})$
- $\text{Profit} = \text{CM Ratio}(\text{Revenues}) - \text{Fixed Overhead}$

Break-even Volume of Work

- Without profit
 - $\text{Revenues} = \frac{\text{Fixed Overhead}}{\text{CM Ratio}}$
- At fixed level of profit
 - $\text{Revenues} = \frac{\text{Profit} + \text{Fixed Overhead}}{\text{CM Ratio}}$

Break-even Volume of Work

Break-even Contribution Margin Ratio

- Without profit
 - $\text{CM Ratio} = \frac{\text{Fixed Overhead}}{\text{Revenues}}$
- At fixed level of profit
 - $\text{CM Ratio} = \frac{\text{Profit} + \text{Fixed Overhead}}{\text{Revenues}}$

Break-even Contribution Margin Ratio

Adjusting the Financial Mix

- Change prices
- Reduce construction costs
- Reduce general overhead

Profit and Overhead Markup

- $$\text{P\&O Markup} = \frac{\text{Gross Profit Margin}}{(1 - \text{Gross Profit Margin})}$$

Tracking Competitors

- Determine what their profit and overhead markup would be based upon your construction costs
- $$\text{P\&O Markup} = \text{Bid/Construction Costs} - 1$$
- Use competitor's historical P&O markups to aid in setting your profit and overhead markup
